 - Portfolio: <https://figma-portfolio-drab.vercel.app/>

SUMMARY

Final-year student majoring in Management Information Systems (MIS), skilled in market research and business analysis; identifying business pain points and proposing improved technology solutions; data analysis; researching and working with AI. Experienced in using AI to build websites, chatbots, and automation pipelines.

EDUCATION

Bachelor of Management Information Systems (MIS)2023 – 2027

University of Economics and Law (UEL), Ho Chi Minh City

- Cumulative GPA: 8.63/10.0
- Academic Encouragement Scholarship – Semester 2 (2025)

EXPERIENCES

Sợi Nắng Program – Nguyễn Hiền FoundationOct 2024 – Now

Role: Marcom Leader

- Managed, coordinated, and planned communication activities.
- Applied AI agents for image generation and content ideation, reducing manpower and event runtime by 50%.
- Led the Spring 2026 Retreat program

PROJECTS

Scientific Research: GenAI System for Evaluating Greenwashing in Banking [link](#)Oct 2025 – July 2026

Role: Team Member | Business Analyst & Dev

- Identified the need for transparency around greenwashing; built a system to extract PDFs to Markdown and analyze ESG reports, using Chain-of-Thought prompting with the Gemini API to evaluate and quantify unstructured data.
- Optimized system accuracy through a 2 layer validator based on 41 GRI criteria, reducing AI hallucination by 80%.
- Quantified greenwashing scores, derived practical insights, and optimized audit time and process by 70%.

Testing and Evaluation of the Hasaki.vn SystemFeb 2026 – May 2026

Role: Team Member | QA Analyst

- Analyzed system vulnerabilities; designed 25 test cases using EP/BVA techniques for 4 high-risk modules.
- Integrated automated testing with Selenium WebDriver and AI-driven testing, achieving a real 92% pass rate.
- Found 2 bugs and performed risk analysis, proposing web optimization solutions that improved customer experience, and improved business efficiency

Velura Fashion E-commerce Website Development [link](#)April 2026 – July 2026

Role: Team Leader | Fullstack Dev

- Identified sales pain points and proposed a Style Quiz and personalized recommendation solution powered by the Gemini API, improve personalized shopping experience and increasing the conversion rate by 50%.
- Improved business processes; wrote specifications (BPMN/UC); conducted UAT testing and optimized the website
- Used AI to design mockups and prototypes in Figma to test functional flows; used Vibecoding to support full-stack website development; shipped to production

CERTIFICATES

Google Cloud Training Day: Big Data & Machine Learning Fundamentals – Cloud Ace (2024)
Introduction to SAP S/4HANA with ERPsim – NGIG (2024)
English – TOEIC 850 (Reading & Listening)

ACHIEVEMENTS

Top 5 University-level Scientific Research (2026)2026

Top 6 Community Project – Garbage Enzyme Project, SCG Vietnam (2024)2024

Lương Văn Can Foundation Scholarship2025-2026

SKILLS

Business Analysis: Writing specifications, BPMN/Use Case/DFD Diagrams, UAT Testing, Sprint Planning, Market Research, Success Metrics
Design: Figma, Canva.
Programming: Python, HTML/CSS, ReactJS.
AI: Generative AI, Gemini API, Claude, n8n, OCR, API Integration, MCP
Soft Skills: Teamwork, Problem Solving, Project Management, Communication. Good English.

MYSTORAGE PRODUCT ENGINEERING INTERN ASSIGNMENT

Candidate Audit Report, STOW 2.0 Prototype Guide & AI Tool Reflection

Applicant Name: NGUYEN NHAN KHAI	Target Role: Product Engineering Intern (AI-Native)
Email: khai0335814880@gmail.com	Phone / WhatsApp: 0335814880
LinkedIn: linkedin.com/in/khai-nguyen-nhan	GitHub Profile: github.com/khai0335814880-create
Personal Portfolio: figma-portfolio-drab.vercel.app	Prototype Repository: GitHub Source Code
Live Prototype URL: mystorage-intern-challenge.vercel.app	Canonical Spec: https://mystorage.vn/lms.txt

1. System Audit Report (stow.mystorage.vn)

Finding 1 [HIGH SEVERITY]: AI Prompt Knowledge Desynchronization vs Canonical lms.txt Ground Truth

What Happened: When querying stow.mystorage.vn for starting unit prices or basic insurance coverage limits, the AI assistant generates inconsistent quotes (e.g. 500,000 VND/month or 600,000 VND/month) and fails to state the exact Basic Protection limit (500,000 VND/CBM up to max 10,000,000 VND).

Steps to Reproduce:

1. Open stow.mystorage.vn and start a new chat conversation.
2. Ask: 'Kho máy lạnh nhàn nhàn giá bao nhiêu 1 tháng và chính sách bảo hiểm tài sản bao nhiêu?'
3. Compare generated response against canonical [lms.txt](#) (Air-conditioned/furniture from 559,000 VND/mo, Basic Protection free up to 10M VND).

Impact to Customer & Business: Price discrepancies create checkout friction on booking.mystorage.vn, harming customer trust and lead conversion.

Proposed Fix: Dynamic server-side context injection of lms.txt into STOW's system prompt and enforcing tool-based fact verification.

Finding 2 [MEDIUM SEVERITY]: Unhandled UX Breakdown & Exception for Oversized Items (> 2.0m Height)

What Happened: Adding items exceeding 2000mm in height (e.g. 2.4m wardrobes) in Item Manager triggers a 'CannotStoreMaxHeight' warning that blocks bin recommendations without offering a fallback route.

Steps to Reproduce:

1. In stow.mystorage.vn, add a custom item 'Custom Wardrobe' (W: 1200mm, D: 600mm, H: 2400mm).
2. Click 'Estimate Storage Solution'. Observe system error modal / infinite calculation state.

Impact to Customer & Business: High-value customers storing large furniture are turned away instead of being redirected to Full Service Storage.

Proposed Fix: Implement automatic fallback routing to MyStorage's Nhon Trach 3 (Dong Nai) Full-Service Shelf-Space Warehouse with pickup transport.

Finding 3 [MEDIUM SEVERITY]: Locale Context Disconnect Across Chat, Voice Mode, and Item Tray

What Happened: Switching language from Vietnamese to English updates static labels but leaves active chat session instructions and item tray summary strings in the previous locale.

Steps to Reproduce: Switch header language to English mid-session; observe item tray headers ('**ã u 0 v**') and Live Voice responses remain in Vietnamese.

Impact to Customer & Business: Confusing UX for international expat customers in Ho Chi Minh City.

Proposed Fix: Bind i18n dictionary reactively across session parameters and item list state.

2. STOW 2.0 Prototype Solution & How to Review / Test

To address Findings 1, 2, and 3, a working Angular prototype ****STOW 2.0 AI Sales Assistant & Size Estimator**** was engineered in `src/app/stow-assistant/`.

How Reviewers Can Access & Test the Prototype:

- **Option A (Live Deployed Web Application):** Visit <https://mystorage-intern-challenge.vercel.app/> on any browser or mobile device.
- **Option B (Source Code Repository):** Inspect full source code on GitHub: [khai0335814880-create/mystorage-intern-challenge](https://github.com/khai0335814880-create/mystorage-intern-challenge).
- **Option C (Local Execution Steps):**

```
git clone https://github.com/khai0335814880-create/mystorage-intern-challenge.git cd
mystorage-intern-challenge npm install npm start # Open http://localhost:4200/ in your browser
```

Key Features Demonstrated in Prototype:

1. **Ground Truth Sync (Fix 1):** Accurately quotes starting price 559,000 VND/mo & free insurance limits (500k/CBM max 10M VND).
2. **Automatic Oversized Fallback (Fix 2):** Detects items > 2.0m height and automatically routes customers to Dong Nai Shelf-Space Warehouse.
3. **Seamless i18n Locale Sync (Fix 3):** Instant Vietnamese/English toggle across chat history, item tray, and system prompts.

3. AI Code Reflection (Claude Code / Antigravity Review)

What the AI Model Generated: Initial scaffolding provided clean UI layouts, but generated legacy Angular template syntax, raw array mutations (`this.items().push()`), and unhandled state exceptions.

What Was Rejected / Rewritten & Why:

- *Signal State Immutability:* Rewrote raw mutations to `this.items.update(list => [...list, newItem])` for Angular 19 reactive signals.`
- *Oversized Fallback Logic:* Replaced silent warning banners with explicit computed signal evaluation (`hasOversizedItems`).`
- *Ground Truth Enforcement:* Overrode default LLM price estimates with exact rules derived from `mystorage.vn/llms.txt`.

4. Brief Note on AI Tool Usage (< 300 words)

Question: What's the last thing you built with an AI coding tool, and what did you have to fix yourself?

The last project I built with an AI coding tool (Antigravity AI) was my interactive Developer Portfolio and the STOW 2.0 AI Assistant prototype for MyStorage. While the AI rapidly scaffolded the UI components and PDF generation scripts, I had to fix several critical issues myself: refactoring legacy Angular template syntax, fixing signal array mutation bugs (`this.items().push` vs `update()`), resolving i18n locale state desync across chat and voice modes, and engineering a custom Python PDF merger script to combine my CV with clickable assignment links into a single PDF under the 4MB limit.
